Subject:

Sequence Search 10/659782

Please search nucleotides 112-462 of SEQ ID NO: 11 and the amino acid sequence of SEQ ID NO: 32 against the commercial and interference protein databases.

Thank you.

Jennifer Dunston, Ph.D. USPTO Art Unit 1636 REM 2B76 Mailbox: REM 2C70 (571) 272-2916

The invention also relates to compositions, reagents, kits and methods for diagnosing, monitoring and treating obesity and/or diabetes. The composition and methods are useful for diagnosing, monitoring and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method of screening animals to determine those more likely to produce dealred growth, appetite and fatness which involves obtaining a sample of genetic material from the animal and assaying for the presence of a genotype in the animal which is associated with favourable growth, appetite and fatness, the genotype characterised by a polymorphism in the ghrelin gene. The composition and methods are useful in screening animals (i.e. pigs) to determine those more or less likely to produce desired growth, appetite and fatness to optimise breeding and selection techniques. The present sequence is human ghrelin protein of the invention.
treating obesity and/or diabetes. These may also be used in drug screening purposes and in gene therapy. The present sequence is the human ghrelin (GHRL) variant protein. This protein is encoded by an obesity and diabetes related gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R lb proteins or nucleic acids. The antibodies, exon 3-deleted form of preproghrelin and antagonists are useful for treating cancer of the reproductive system such as prostate, ovarian, breast, cerrical or uterine cancer, choriocarcinoma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted
                                                                                                                                                                                                                                      Ghrelin, preproghrelin, GHS-R 1b; benign prostatic hyperplasia; therapy; breast; cervical; uterine; choriocarcinoma; prostate; ovary; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying a cancer cell or tissue for treating prostate, ovarian, breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or allelic variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated vith gastrointestinal cell contractility, secretion of digestive enzymes/acids, gastrointestinal motility, recruitment of digestive enzymes, gastrointestinal inflammation, reflux disease and nutrient or enzymes, gastrointestinal professes may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety or treat obesity and other metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify zsig33 goonists, antagonists and ligands and to produce antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                              Zaig13; gastric motility; gastrointestinal inflammation; reflux disease; nutrient absorption regulation; obesity; metabolic disorder.
                                                                                                                                                                                                                                                                                                                          Human polypeptide having homology to motilin, zsig33 - useful e.g. to treat gastrointestinal motility disorders, obesity etc. and to identify antagonists to treat gastrointestinal hypermotility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be associated with decreased activity or function of HSPP. Antagorists of HSPP are used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagorists of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation including cancer), inflammation, cardiovascular, neurological, reproductive or developmental disorders, (e.g. arteriosolerosis, circhosis, psoriasis, acquired immune deficiency syndrome, anaemia, circhosis, psoriasis, acquired immune deficiency syndrome, anaemia, circhosis, disease, Alaheimer's Parkinson's or Huntington's disease, Alaheimer's Parkinson's or Huntington's disease, Alaheimer's Parkinson's or Huntington's cischaemic heart disease, Alaheimer's Parkinson's or Huntington's disease, activophrenia, ovulatory defects, muscular dystrophy). HSPP, conclete acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy, as antisense, triplex-forming cribbentics, for detecting related sequences or genetic variations, and for chromosomal mapping HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists of potential therapoutic agents of the used to raise specific antibodies (Ab) and to screen for agonists and antagonists of potential therapoutic agents of the used to raise and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from natural

```
The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see AAB20100), is claimed. SGIP is a ligand for growth hormone secretagogue receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jejunum tissue, modulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating gastric

The invention relates to a method of forming a reversible peptide-
c receptor complex that involves providing an immobilized receptor, and
c contacting the receptor with a zsig33 peptide (Comprising residues 24.37
c of AABG6549), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
c transduction in a cell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
c gastric contractility, nutrient uptake, secretion of digestive and
c gastric contractility, nutrient uptake, secretion of insulin-like growth factor
c j secretion of non-zsig33 proteins. It is useful for modulating growth
c hormone secretion in a mammal having a disease associated with abnormal
c hormone secretion in a mammal having a disease associated with abnormal
c remodeling, low osteoblast levels, cartilage repair and remodeling,
skeletal dysplasia, immune suppression, obesity, growth retardation,
c protein catabolic responses after surgery, cachexia, protein loss,
c protein catabolic responses after surgery, cachexia, protein loss,
c martism, wound healing and ovulation induction, treating a mammal having
a metabolic disorder requiring neurological feedback, such as satiety
c regulation, glucose absorption and metabolism and neuropathy-associated
c gastrointestinal disorders, and stimulating glucose-induced insulin
c release in a mammal. The present sequence represents the human zsig33
c polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, and as a localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, funtington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, archer diagnosis and thrombolytic activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wang D;

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also mocimpasses the unmodified peptides; the DNA encoding the peptides.

The invention and no season peptides in the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention, and an assay and kit for detecting the peptides. The peptides caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth chormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) precursor protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peptide compounds which induce growth hormone secretion and elevate calcium concentrations, useful in treatment and diagnosis of infant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                          Growth hormone secretagogue, GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate 2SIG33 expression.

The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The 2SIG33 mod in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies and also used as diagnostic agents for detecting the production of antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent assay (BLISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zero and zero in gene therapy. The present sequence is and zsig33-like DNA is used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ZSIG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          invention relates to zsig33-like peptides and their corresponding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP SGIP and an assays to identify modulators of antibodies against SGIP and in assays to identify modulators of SGIP expression and activity. The anti-SGIP antibodies, agonists and antianishes may also be used to regulate expression and activity. The anti-SGIP antibodies may also be used as diagnostic agents for detecting the presence of SGIP in samples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Short Gastrointestinal Peptide, which has homology to motilin, useful for preventing, diagnosing and treating gastrointestinal disorders.

The invention relates to zsig33-like peptides (ZS33LP) including zsig33-CC linker, zsig33-beta, zsig33-gamma, zsig33-delta and zsig33-epsilon control peptides and nucleic acid molecules encoding such zsig33-like peptides. ZS33LP peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients auch as human immunodeficiency virus (HIV) patients, in improving vaccines and in the invention are used to identify and isolate receptors involved in growth regulation in the liver, blood vessel formation and other contentiation in the liver, blood vessel formation and other compendent processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic chypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic chypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic corpusations containing glucose and as adsorption enhancers for the insulin release. They are also useful as research reagents for cell-cell interactions of tissues associated with gastrointestinal and growth captened of insulin releases. They are also useful as research reagents for the expansion, differentiation, growth factor and hormone secretion and growth creating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth created diseases. Z633LP peptides, nucleic acids and/or antibodies are contractility, secretion of digestive enzymes, inflammation and regulation contractility, recruitment of digestive enzymes, inflammation and regulation of contractility, and digestive enzymes, inflammation and acids, contractility, accruitment of digestive enzymes, inflammation and acids, contractility, accruitment of digestive enzymes, inflammation and acids, contractility ande
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises zsig33-like

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186 stimulate adrenal cortical capillary endothelial growth, and PRO536, PRO943, PRO928, PRO926, PRO1069 or PRO535, PRO1060 or PRO535, PRO1060 or pRO535, PRO1060 or disorders where angiogenesis would be useful for treating conditions or disorders where angiogenesis would be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346 and PRO1375, which stimulate proliferation of stimulated T-lymphocytes are therapeutically useful for enhancing immune response and in cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25-JUN-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25-JUN-1998
                                                                                                                                                                                                                                                                                                          10-JUN-1998
          beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PROB12 inhibits vascular endothelial growth factor (VEGF) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth in cells and is thus useful for inhibiting tumour growth. PROB26, PRO1184, PRO1346 and PRO1375 stimulate proliferation of stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PROB26, PRO10182 is also enhances survival/proliferation of retinal neurons cells (PRO1132 is also enhances survival/proliferation of redinal neurons cells (PRO1132 is also enhances survival/proliferation of redinal neurons cells (PRO1132 is also enhances survival/proliferation of isorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 and PRO11066 induce proliferation of mammalian kidney mesangial cells, and therefore are useful for treating kidney disorders associated with dermatitis, herpetiformis or Crohr of disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the amino acid sequence of a novel human PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; PRO; secreted protein; transmembrane protein; cardiac insufficiency disorders; angiogenesis; wound healing; cancerous tumour; immune response; retinal disorder; sight loss; retinitis pigmentosum; age-related macular degeneration; AMD; kidney disorder; Berger disease; nephropathy; dermatitis; herpetiformis; Crohn's disease; sports injury; arthritis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

All forms are found in serum as well. Other tissues compensate for the loss of ghrelin synthesis in the stomach following gastrectomy. PTM: O-n-octanoylation is essential for ghrelin activity. The O-n-decanoylated forms Ghrelin-27-C10 and Ghrelin-28-C10 differ in the length of the carbon backbone of the carboxylic acid bound to Ser-26. A small fraction of ghrelin, ghrelin-28-C10:1, may be modified with an unsaturated carboxylic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PTM: Amidation of Leu-98 is essential for obestatin activity (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            in growth regulation.
PUNCTION: Obseratin is a specific ligand for the GPR39 receptor. It has an appetite-reducing effect, results in decreased food intake, and reduces gastric emptying activites and jejunal motility (By similarity).
SUBCELLULAR LOCATION. Secreted protein.

Submitted (JUL-2002) to the EMBL/GenBank/DDDA databases.
-!- FUNCTION: Ghrelin is a specific ligand for the growth hormone secretagogue receptor type I (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
-!- FUNCTION: Obestatin is a specific ligand for the GPR39 receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Removed in mature form (By similarity).

Submitted (JUL-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Ghrelin is a specific ligand for the growth hormone
secretagogue receptor type 1 (GHSR) inducing the release of growth
hormone from the pituitary. Has an appetite-stimulating effect,
induces adiposity and stimulates gastric acid secretion. Involved
in growth regulation (By similarity).
-!- FUNCTION: Obsetatin is a specific ligand for the GPR39 receptor.
It has an appetite-reducing effect, results in decreased food
intake, and reduces gastric emptying activites and jejunal
                                                      Gaps

Name=2; Synonym==d-Gln14-ohrelin;
Isoid=OBEXX0-1; Sequence=Usp.003246;
-: TisSUB SPECIFICITY: Mainly expressed in the gastrointestinal tract with higher levels in the stomach, medium levels in the duodenum, jejunum, ileum and colon. Low expression in the testis and brain.
Not detected in the salivary gland, pancreas, liver and lung.
-:- DEVELOPMENTAL STAGE: Levels of n-otenoylated and n-decanoylated ghrelin drop by one third and 3-fold, respectively, between postnatal weeks 3 and 4 due to change of diet during weaning.
-:- PTW: On-octanoylation is essential for ghrelin activity (By similarity). The O-n-decanoylated form ghrelin-Cl0 differs in the length of the carbon backbone of the carboxylic acid bound to Ser-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Copyrighted by the UniProt Consortium, see http://www.uniprot.org/terms Distributed under the Creative Commons Attribution-NoDerivs License

Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).

--- FUNCTION: Obsertation is a specific ligand for the GPR39 receptor. It has an appetite-reducing effect, results in decreased food intake, and reduces gastric emptying activites and jejunal motility (By similarity).

--- SUBCELLULAR LOCATION: Secreted protein.

Very low levels are detected in the hypothalamus, heart, lung, pancreas, intestine and adipose tissue. Obstatin is most highly expressed in jejunum, and also found in duodenum, stomach, pituitary, ileum, liver, hypothalamus and heart. Expressed in low levels in pancreas, cerebellum, cerebrum,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
